

VoxTable Data Retention & Deletion Policy

Standard service retention schedule

Version 2.1 | Effective 27 August 2026

This Policy describes Biteperk's standard retention targets for VoxTable. An Order Form or lawful Customer instruction may specify a shorter period. Biteperk will not retain Customer Personal Data longer merely because storage is available.

1. Retention principles

- Purpose limitation: keep data only while it is reasonably needed for the configured service, legal obligations, security or dispute handling.
- Data minimisation: avoid collecting or retaining information that is not needed for the relevant service function.
- Customer control: where Biteperk acts as processor, Customer may instruct earlier deletion subject to legal/technical limits.
- Backup discipline: data deleted from live systems may remain temporarily in protected backups, beyond ordinary use, until the applicable backup cycle overwrites it.

2. Standard retention schedule

Data category	Default / target retention	Notes
Call audio recordings	30 days under the standard Australian configuration; a venue may select up to 90 days where that option is offered.	Earlier deletion may be requested. UK deployments should use the period stated in the Order Form / configured policy.
Call transcripts	30 days under the standard Australian configuration; up to 90 days where venue-selected and lawfully configured.	Transcripts may contain more searchable personal information than audio and should not be retained longer than operationally necessary.
Booking/order records	For the active customer relationship and a reasonable export/closure period, subject to Customer instructions and legal requirements.	These are ordinarily venue business records. Customer should export records it is required to retain.
Account / authorised-user data	For account life plus a reasonable security, billing and dispute period.	Access credentials/tokens are revoked promptly when no longer required.

Data category	Default / target retention	Notes
Support communications	For as long as reasonably needed to resolve support, maintain service history and handle disputes.	Sensitive information should not be included unless necessary.
Security / audit logs	Risk-based period appropriate to investigation, fraud/security and compliance needs.	Access restricted; not used for marketing.
Website enquiries	For as long as needed to respond, manage a resulting pilot/commercial relationship and comply with legal obligations.	Delete earlier when no longer needed.
Backups	Normal rolling backup lifecycle.	Deleted data is put beyond ordinary use and remains protected until overwritten.

3. Termination

When a subscription ends, Biteperk shall provide any agreed export window and then delete or return Customer Personal Data in accordance with the DPA, subject to legal retention requirements and backup lifecycle controls.

4. Legal holds and incidents

Deletion may be temporarily suspended where information must be preserved for a legal claim, regulator request, security investigation or other lawful obligation. Access remains restricted during the hold and deletion resumes when the hold ends.

5. Review

Biteperk reviews this schedule at least annually and when a material product, provider, jurisdiction or storage architecture changes.
