

VoxTable Privacy and Data Handling Schedule

Sample document set SAMPLE-2026-08. Based on Biteperk AU public privacy policy reviewed 2026-08-16.

SAMPLE ONLY. This document is a non-production reference draft for testing the VoxTable onboarding legal-document publication flow. It is not legal advice, not an executed agreement, and must be reviewed by qualified counsel before customer use.

1. Scope

This sample schedule describes how Biteperk handles personal information for VoxTable venues, venue staff, website visitors, and callers to venues using VoxTable. It is based on the public Biteperk AU privacy policy structure and should be reviewed before production use.

2. Information collected from venues

Venue information may include business contact details, billing details, setup information, menus, opening hours, booking rules, phone configuration, notification recipients, and support messages. This information is used to configure and operate the service.

3. Information collected from callers

Caller information may include audio, transcript, phone number, caller name, booking or order details, party size, requested time, selected menu items, special requests, and operational notes volunteered during the call. The AI assistant announces itself and the recording/transcription before the service proceeds.

4. Use of information

Biteperk uses information to provide the selected VoxTable services, answer enquiries, create bookings or orders, notify the venue, support the customer account, maintain security, troubleshoot incidents, and bill the service. This sample follows the public privacy-policy position that personal information is not sold and caller conversations are not used to train AI models.

5. Storage and processing locations

Operational records may be stored with cloud infrastructure in Australia. Live AI voice processing may involve providers outside Australia, including the United States. Biteperk remains responsible for choosing appropriate providers and written data-protection terms.

6. Retention

Call recordings and transcripts should be deleted automatically after the retention period selected by the venue, such as 30 days or 90 days. Booking and order records may be retained while the venue remains a client because they are operational business records. Callers may request earlier deletion where legally available.

7. Automated handling

VoxTable is automated because an AI assistant answers calls and creates booking or order records based on venue rules. Callers are told they are speaking with an AI assistant and may ask for a person or choose not to continue. Venue staff can review and correct operational records.

8. Security controls

Reasonable security controls should include encrypted transport, encrypted storage, least-privilege access, multi-factor authentication for administrative access, audit logging where appropriate, and short retention of recordings. No system is risk-free, so suspected security issues should be reported promptly.

9. Access, correction, deletion, and complaints

Venue users and callers may ask what information is held about them and request access, correction, or deletion where applicable. Privacy enquiries and complaints should be sent to hello@biteperk.com.au. Australian individuals may also contact the Office of the Australian Information Commissioner if dissatisfied with the response.

10. Updates

Production privacy documents should be versioned. Material changes should be published with a new `document_set_version` so the onboarding acceptance ledger records exactly which version and hashes were accepted.
