

VoxTable Subprocessor Register

Service-provider categories and processing locations

Version 2.1 | Effective 27 August 2026

Maintain the live version of this register on the Biteperk legal website. This PDF is a versioned snapshot. As at the effective date, Biteperk has confirmed Google Cloud, Twilio and Retell AI as the core VoxTable subprocessors/service providers. The live register must be updated before any new material subprocessor begins processing Customer Personal Data where notice is required under the DPA.

1. Core service providers

Provider / category	Purpose	Typical location / transfer note
Google Cloud	Cloud hosting, application infrastructure, database/storage, backups and operational logging used by VoxTable.	Australian production booking/order records are hosted in Australia (Sydney) under the standard deployment. UK deployment location is configured for the applicable service; any processing outside the UK is subject to the DPA international-transfer provisions.
Twilio	Telephony, inbound/outbound call routing, telephone numbers, media transport and SMS/operational messaging where enabled.	Twilio offers Australia (AU1), Ireland (IE1) and US (US1) processing regions for supported services. The configured VoxTable region and any residual account/usage processing outside that region are handled under applicable data-transfer safeguards.
Retell AI, Inc.	Real-time conversational voice AI, speech recognition/synthesis, call orchestration, transcripts/summaries and related voice-agent processing.	Retell AI is based in the United States and states that personal information is primarily stored and processed in the United States. UK and Australian transfers to Retell AI are handled under the DPA and applicable transfer safeguards.

2. Website providers that are not necessarily subprocessors

Provider	Purpose	Role note
Plausible Analytics	Privacy-first website analytics.	Configured as cookieless analytics; role depends on configuration and data processed.
LinkedIn	Marketing measurement / Insight Tag where consented.	May act as an independent controller under its own terms rather than a VoxTable subprocessor.
Google Ads - where enabled	Advertising measurement where consented.	May act as an independent controller under its own terms rather than a VoxTable subprocessor.

3. Affiliate processing

Biteperk Ltd and Biteperk Pty Ltd may support one another. A group entity is treated as a separate recipient/subprocessor where required by applicable law. UK Personal Data transferred by Biteperk Ltd to Biteperk Pty Ltd in Australia is subject to the international-transfer provisions of the DPA.

4. Customer notice and objections

For UK Customers using general subprocessor authorisation, Biteperk will provide reasonable advance notice of a new material subprocessor and allow objections on reasonable data-protection grounds in accordance with the DPA.
